

Classic Series Enclosures

These world-renowned cabinets are synonymous with bass enclosures and the sound they are expected to produce. All enclosures feature dual Neutrik Speakon® and 1/4" input/output jacks. Cabinets using high frequency horns contain a variable level attenuator. To prevent overpowering and damaging the horns, a resistive bulb is wired in series with the horn for protection.

SVT-810HP - Classic Design, Innovative Technology.

The new SVT-810HP is a true 8x10 in the classic sense with 4 sealed infinite baffle 2x10 "boxes" just like the original. However, the speakers used are a new cast-frame speaker with an edge-wound aluminum voice coil for maximum clarity and power handling. Two of these speakers are TRACTRIX Wave-Guide coaxial speakers that reproduce high frequencies like no other speaker. The "L-Pad" attenuator on the rear panel allows you to adjust the highs to suit your individual needs. This cabinet is rated at 1500 watts RMS, and 3000 watts program, thus making it the highest rated Ampeg enclosure.
