

## Pro Series SVT-5 Pro Head

The SVT-5PRO offers the ultimate in flexibility of tone for the modern rock and funk bass player. By combining the 2-channel technology of the SVP-BSP preamp and an octave circuit, the available sonic palette is virtually limitless.

The SVT-5Pro features a two channel operation - a clean and a distortion, plus an octave divider circuit. Activate the "combine" feature and mix the output of both channels for even more versatility.

The power section features a massive 1350 watt Ampeg power amp so you can create a multitude of sounds and textures on many levels.

The SVT-5PRO offers more power, performance and flexibility than any other bass amp in its class.

Whatever sound you're looking for, it's the SVT-5PRO.

## Pro Series Enclosures

The term "high-fidelity" has often been misused from its original meaning of true, realistic sound. When we say these enclosures are hi-fi, we mean real "high-fidelity" sound. Pro Series cabinets are designed to accurately reproduce the output signal of the amplifier at OSHA disturbing levels.

At the heart of the enclosures are the premium American-made, cast-frame drivers. Large edge-wound aluminum voice coils, vented back plates, and oversized ceramic magnets all add to the premium tone and fast response.

These cabinets are not only made for the stage; they're made for the transport between stages. The 13-ply void-free Baltic birch cabinets are heavily braced to add rigidity. Corners and edges are protected with shock-absorbing PVC armor and the speaker protection grilles are made of 16 gauge steel.
