

B-Series Heads

Straight-ahead power and tone that let you rock like a world class act – even before the royalty checks roll in.

When you're ready to *be* a player, check out the powerful, versatile textured sounds the B-Series has to offer.

The two-rack space B-2R uses a 350 watt MOSFET amp, while its bigger brother, the 1000 watt B-4R, is the most powerful in its class.

These powerhouse heads give you everything you need for today's music.

The 500 watt B-5R is designed to take the B-Series premise one step further. Not only does it have great plug-and-play sound in the clean channel, but you can channel switch or blend in awesome overdrive sounds. The integral variable octave divider expands your playing horizons for special effects or tone extension.

All B-Series heads include XLR balance line outs, effects loops, optocoupler limiters for distortion-free operation and Ampeg's unique Ultra-Mid tone circuitry.
