

B-Series BXT Enclosures

When Victor Wooten and Steve Bailey were looking for full range cabinets, they came to Ampeg. They wanted to capture on-stage the same tone they were used to during playback in the studio - only a lot louder.

The BXT-410HL extended range enclosure uses four cast frame 10" speakers and a new crossover design that smoothes out the highs for incredible definition.

The variable level control adjusts the top end to perfectly match your instrument.

The BXT-115HL single 15" and horn features the same extended range design eliminating the need for additional sub cabinets.

Both enclosures are available in 4 Ohm versions. They include 1/4" and Neutrik Speakon® connectors and employ the same high frequency protection found on the Classic and Pro Series cabinets.

B-Series Enclosures

Premium sound doesn't have to mean premium prices.

Our B-Series enclosures prove that fact. Available in a single 15" driver with tweeter configuration with full range, and extended range 4 x 10's with horns, the cabinets employ a modern, smaller profile for compactness. The sound is a round, full bodied tone with punchy highs, accentuated mids, and complete lows.
