

# Expandora

from Bixonic  
/'big'sä-nik/

The Bixonic Expandora™ is no ordinary "fuzz box," but a sophisticated distortion device that allows the user to preset different gain structures. The Gain, Tone, and Level controls combined with its internal DIP switches let you set the exact sound you're looking for, from TS-808 overdrive to germanium-transistor Fuzz Face and every shade in between.

The Expandora's DIP switch settings correspond to three basic gain structures. Crunch gives the least gain; Overdrive gives medium gain; Distortion gives the most gain. And don't forget to try the "forbidden" setting with both DIP switches down! The Expandora is dynamically sensitive, allowing users to vary the amount of distortion by adjusting their instrument's volume knob. In addition, all of the Expandora's settings retain excellent note-to-note definition, even with chords!
