

Optional Stock PreAmps or CustomShop PreAmps

From the beginning, the MQ4 was designed to allow the guitarist to determine just how their amp should respond and sound. Many players will be satisfied with the stock offering of Cruise PreAmps in the MQ4--starting with a Clean channel and adding progressive amounts of gain with each successive channel. But more and more, players are demanding specific preamps for their particular applications and styles. This is where the Cruise MQ4's really shine! Imagine being able to order your MQ4 with any combination of the available channels--and do so at a very affordable price. Cruise Audio will strive to add more PreAmps to this list in the coming months and years! And as your playing and technique evolve so will your MQ4 because you'll always be able to customize your sound with the heart and soul of real-tube preamps!

PreAmp Options

- ⚙ **Stock Clean/Blues:** sweet, fluid, warm and buttery. A tremendously variable PreAmp for all your clean tones and the perfect choice for use with the Piezo/Ch 1 Input.
- ⚙ **Stock Blues/Vintage:** as the name implies it's just dirty enough with a huge dynamic range which will respond perfectly to your playing style (play soft and it cleans up/play hard and it begins to smolder with just enough grit). This PreAmp is sensitive and

warm enough to be used as a secondary clean channel for thick jazz tonalities.

- 🔊 **Stock Classic/HiGain**: the British Isles beckon. Need we say more?
 - 🔊 **Stock UltraGain**: Scorching solos and huge parallel 5ths will be the hallmarks of this fine PreAmp. The voicing switch on this PreAmp enables you to have a smooth midrange response in one position while in the other the mids are perfectly scooped for metal heaven (is that an oxymoron?)
 - 🔊 **CustomShop Dee-luxe**: an American classic. Smooth, warm and responsive. The perfect PreAmp for everything from clean blues to surf to jazz. (*Available January 2000*).
 - 🔊 **CustomShop ModBrit**: a modern British PreAmp. Lot's of growl and gain, punchy mids and a thick low end. (*Available January 2000*).
 - 🔊 **CustomShop Class "A"**: when used in combination with some of the Class "A" settings of the Wattage Selector control the sound of this PreAmp is unmistakable--bright, shimmering and 60's! Who's got the electric 12 string? (*Availability TBA soon*).
