

GUITARS

Our aluminum body guitars exhibit unsurpassed tone and sustain with extraordinary chime and presence - this helps our guitars machine our aluminum body components out of aircraft grade

The aluminum-to-wood neck attachment joint is slender, allowing upper register frets. To ensure a solid connection and to machine our necks with six screws. We provide our guitars with 22 fret

The strings-through-body design is our standard configuration mahogany or maple, coupled with a rosewood or ebony fret rod provides precise, personal adjustment. The action can be set to preference.

The standard neck profile is the comfy "C" configuration. Guitars are finished in finishes of various anodized colors, standard/custom color lacquer or powder coating colors.

Our wood components are finished with nitrocellulose lacquer. The guitar is well balanced and has a weight of 7 ½ lbs. Quarter inch but single coils are available, if desired. Locking tuners are available

We use exacting manufacturing methods and repeated quality control construction to ensure that every Jorstad Guitar is a piece of art at exhilarating sonic levels.
