

Parlour	Dimensionally similar to Martin's size "O", this little 12 fret guitar is a crowd pleaser. Louder than you might expect given it's compact size, it is just plain fun to play. It's short scale gives you light action and makes string bending easy. Although it is a great choice for guitarists of smaller stature it is popular with everyone because it is easy on the fingers, travels well, and has great balance. Who said great sound only comes from big guitars?
Concert	With a shape reminiscent of Gibson's L-OO This 14th fret, mid-sized guitar has a deep body which contributes to its big voice. Available in a variety of scale lengths to suit different playing styles this guitar is remarkable versatile.
Grand Concert	My version of the venerable 14 fret OM. Also available with a special deep body which improves bass response.
Dreadnaught	Dreadnaughts are probably the most common steel string acoustic guitar. Why mess with perfection? My dreadnaught has a 14 fret neck , scalloped x-bracing, and a large list of options.

Prices start at \$2000.00 for an instrument with Sapele back and sides, a Sitka Spruce top, simple plastic bindings, and Grover Vintage Style tuning gears. However, each guitar is custom built to your specifications and pricing is a-la-carte so exotic woods or lots of options will run the price up pretty quickly.

Use [this checklist](#) to note your preferences and then talk to me about your dream guitar. I'll give you a realistic estimate of the time it will take and I'll gather current prices for the options you want.
